1. Abstract :

CampusChaos is a centralized web-based platform designed to manage and streamline college events. Currently, event management in colleges is fragmented across multiple channels like WhatsApp groups, posters, and word-of-mouth, leading to missed opportunities and poor participation.

The proposed system provides a single portal where students can discover, register, and track events, while organizers can create, manage, and monitor them efficiently. It includes features such as event listings, online registration, notifications, and real-time updates.
The platform improves communication, reduces manual work, and enhances participation by providing a structured and accessible system. It also enables better coordination between students and organizers.

CampusChaos can be extended to include analytics, role-based dashboards, and AI-based event recommendations in future, making it a scalable solution for modern campus event management.

2. Introduction

Background:
Colleges conduct multiple events, but there is no unified system to manage them.

Importance:
Students miss events due to poor communication; organizers struggle with registrations and tracking.

Real-world Applications:
College fests
Club activities
Workshops and seminars
Hackathons

Scope:
Centralized event listing
Online registration system
Admin/event organizer control
Scalable to multiple colleges

3. Problem Statement

College event management is currently unorganized and inefficient. Information about events is scattered across platforms like social media, messaging apps, and physical notices, causing confusion and low participation.
Students often miss deadlines or are unaware of events, while organizers face difficulties in handling registrations, maintaining participant records, and sending updates.

This lack of a centralized system leads to wasted effort, poor coordination, and reduced engagement. The problem exists due to reliance on manual processes and absence of a dedicated digital solution.
CampusChaos solves this by providing a single platform that connects organizers and students, ensuring smooth event discovery, registration, and management.

4. Objectives

- To design a centralized portal for managing college events
- To simplify event registration and participation
- To improve communication between organizers and students
-
- To reduce manual effort and increase efficiency

5. Literature Survey

Sl.No	Author & Year	Title	Method Used	Limitations
1	Smith, 2020	Event Management Systems	Web-based platforms	Limited scalability
2	Kumar, 2021	College Event Apps	Mobile applications	No centralized control
3	Lee, 2019	Event Booking System	Database-driven	Poor UI/UX
4	Sharma, 2022	Student Portals	Web portals	No real-time updates
5	Patel, 2021	Registration Systems	Form-based	No automation
6	Wang, 2020	Event Scheduling	Algorithm-based	Complex usage
7	Rao, 2023	Campus Apps	Hybrid systems	Limited features
8	Khan, 2022	Online Event Systems	Cloud-based	Security issues

6. Proposed System

➢ **System Overview:**

- CampusChaos is a web platform where:
- Admin manages users and events
- Organizers create and manage events
- Students browse and register

➢ **Improvements over existing systems:**

- Centralized platform (no scattered info)
- Automated registration tracking
- Real-time updates and notifications
- Better user experience

➢ **Technologies Used:**

- Frontend + Backend integration
- Database for storing events/users
- Authentication system

7. Tools and Technologies

Category	Tools
Programming	JavaScript / Python
Frontend	HTML, CSS, React (or basic JS if you used that)
Backend	Node.js / Express
Database	MongoDB / MySQL
Platform	Web (Browser-based)
Version Control	Git / GitHub
